Safety with Chemicals for Technicians

This course is suitable for technicians who are taking on or have responsibility for chemicals. No prior chemical knowledge is required. The course can be helpful in adapting outside experience to work in school science.

The Safe and Effective D&T Technician

This course is designed primarily for D&T Technicians working in the resistant materials area who are new to the job, but will also be of benefit to experienced technicians. The course will cover essential health and safety and offer advice on the layout of the preparation area to ensure safe use of machines, safe storage of hazardous materials, methods of storing consumables, small components and valuable equipment.

Health & Safety for Science Technicians

This course aims to raise awareness of safety issues and current H&S legislation and to make technicians more comfortable with their responsibilities. Attendees will practise risk assessments and consider what safe management – managing safely means in practice.

Radiation Protection Supervisor Training

This one day course is for the school radiation supervisor (the person responsible for managing the safe storage, use and monitoring of radioactive sources in the science department). It includes numerous practical demonstrations with relevant safety points embedded within them.

How to apply

To register your interest for a place on any CLEAPSS course, please complete the CPD booking form on our website or email booking@avontsa.com
